

Agtron S-SERIES III

The S-Series III Agtron Process Analyser

The new S-SERIES III is the result of Agtron's 50 years of experience supplying analytical equipment to the food industry. It is an all solid-state replacement for the previous Agtron M-45 general application analyzer.

Applications

The AGTRON S-SERIES III is a small area (2sq.in.) reflectance spectrophotometer designed to deal with the challenge of measuring color homogeneous liquids, pastes, powders, creams, small particulates and samples of uniform geometry.

Operation

Simple calibration, non-critical sample preparation, easy to understand single number scores, and robust construction make the S-SERIES III the ideal choice for both product development and production quality control.

Calibration

The S-SERIES III is calibrated using reference reflectance disks.

Ease of use

Process assessment is made quickly and easily without the necessity of highly technical operations, mathematical or graphic correlations, special colour reference standards, or complex sample preparation.
